

PocketTrae

Mobile action cards for TRAE workflows

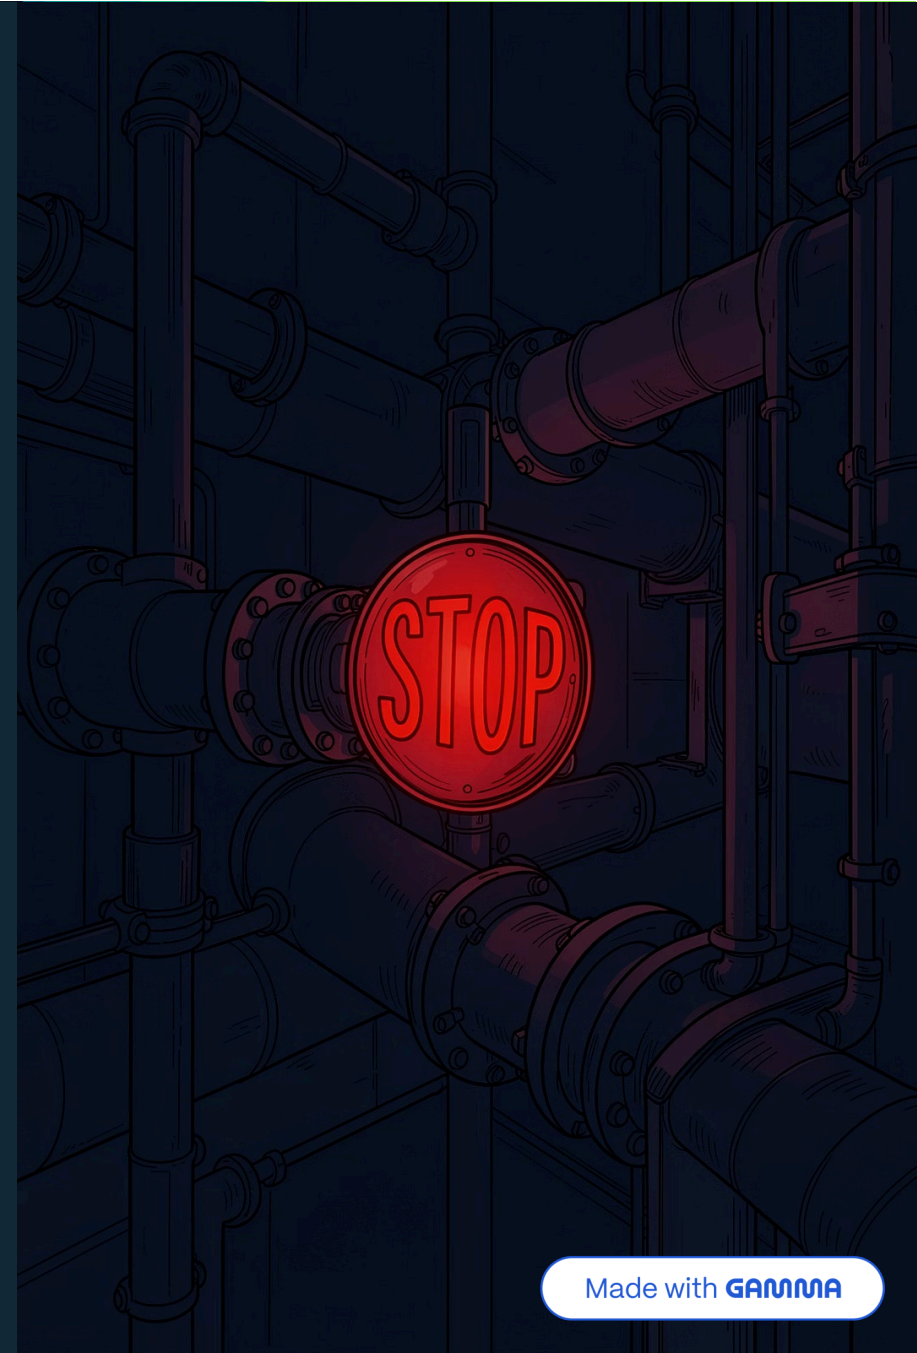

Agents still hit human bottlenecks

Deploys wait for approval

Incidents wait for acknowledgement

People return to laptops

Flow breaks at handoff

Turn approval into one tap

Create Action

Send Decision

Tap Approve

Resume TRAE

Structured decisions. Zero context switching.

Desktop to mobile to action

01

Hotfix ready on desktop

TRAE detects deploy gate

02

Approval card appears on phone

Structured context, one action

03

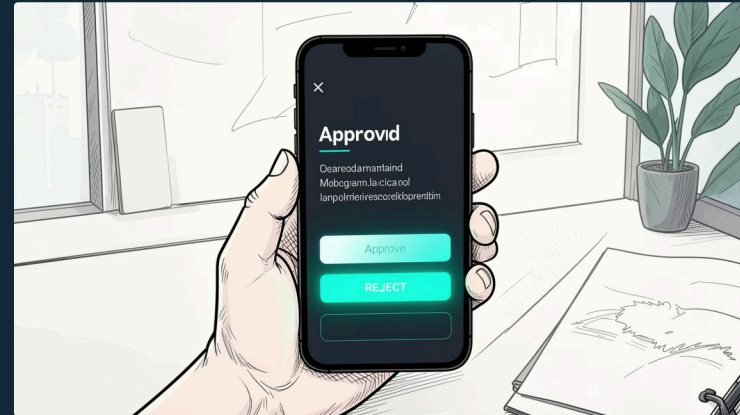

Approver taps approve

Single tap, no login required

04

Desktop continues immediately

TRAE resumes from exact state

TRAE is the control hub

- Orchestrates workflow state
- Generates structured actions
- Preserves task context
- Continues after response

Faster approvals, less interruption

90%

Time saved

Minutes become seconds

0

Ping loops

No manual follow-up needed

1

Tap to approve

Faster operational response

Before: Slack ping → laptop → find context → approve → back to phone

After: Card arrives → one tap → done

Thin mobile, strong orchestration

Desktop TRAE

Action Transport

Mobile Decision

Response Return

No mobile agent. No state on device. Pure decision surface.

Built for real workflows

Clear productivity story

Measurable time saved per approval

Strong TRAE integration

Native to agent execution model

Simple demo, strong wow

One tap closes the loop live

Practical to ship

Thin client, no new infra

Keep agent workflows moving

Human approval

One tap

Agents stay in flow

No interruption

Real ops fit

Ships fast

PocketTrae — structured decisions, anywhere.
